

# AI makes fake documents look real. Portage makes trust verifiable.

High-assurance digital signatures for professional responsibility, compliance risk, and long-term legal evidence.

## The AI-era document problem

Generative AI makes it easier to create polished reports, contracts, drawings, seals, and identity impersonation at scale.

## That changes the buying question

It is no longer just: "Can we sign this online?"

It is: "Can we prove who signed, what was signed, and that the proof still holds up?"

## What trusted digital signing must prove

1

### Verified Identity

Prove the individual signer and the assurance level behind that identity.

2

### Document Integrity

Prove the document was not changed after signing.

3

### Durable Evidence

Preserve auditable proof for compliance, investigation or dispute resolution.

## Why basic e-signature falls short

Useful for low-risk consent. Not enough for regulated and public-trust documents or professional accountability.

### Limited For High Risk

- × Weak identity assurance
- × Thin audit trails
- × No trusted CA-backed credential

## The Portage portfolio advantage

Connect identity proofing, trusted certificate issuance, secure signing workflows, and evidence management.

### CertifiO ID

#### Verify the signer

- Strong verification
- Assurance matched to risk

### CertifiO

#### Bind verified identity to a certificate

- CA-backed credential
- Trusted authenticity

### ConsignO Cloud

#### Sign with evidence

- Secure workflow
- Auditable evidence + document integrity

## Built for workflows where proof matters most

Regulated professionals

Associations & regulators

Government

High-value approvals

**Outcomes:** protect professional identity and seals, reduce document fraud exposure, support public protection, strengthen compliance, and preserve legal reliability over time.

## Ready to make document trust verifiable?

Ask Portage which signing workflows need verified identity, trusted certifications, tamper-evident documents, and durable proof.
