

A cloud-based digital signature option for today's professionals

Professional practice is becoming more mobile, more digital, and less tied to a single workstation. CertifiO Cloud gives professional regulatory organizations (PROs) a flexible, AATL compliant digital signature option for members who need to sign securely from more places, on more devices, with less setup.

Offered alongside CertifiO Desktop, CertifiO Cloud expands member choice without disrupting your existing signature ecosystem.

Why offer CertifiO Cloud?

Sign from anywhere

Members can use CertifiO Cloud from any computer, tablet, or mobile device with an internet connection.

Less setup, less management

No local signature file or certificate management software required.

Works with existing signing tools

Compatible with ConsignO Cloud Solo, ConsignO Cloud, and ConsignO Desktop.

AATL compliance (Adobe Approved Trust List)

Signed documents display the trusted green checkmark in Adobe Acrobat and can be validated in other popular PDF readers.

Ready for what's next

A cloud-based foundation for future improvements and integrations.

What stays the same?

CertifiO Cloud adds more ways for members to access their digital signature, but does not change the certificate information, approval process, or trust framework behind it.

- Certificate information remains consistent, including professional association, title, and membership details.
- Membership approval, validation, and revocation processes do not change.
- Digital signatures maintain the same high standards for authenticity, document integrity, and legal reliability.
- Members can manage signature and seal appearances with the same level of flexibility they expect from CertifiO.

How CertifiO Cloud fits into your member offering

Enhance your digital signature offering with options that align with how members work and the tools they rely on—whether at the office, in the cloud, or in the field.

CertifiO Cloud

A cloud-based signature option for members who need mobility, simplified access, Adobe recognition and compatibility.

CertifiO Desktop

A desktop-based signature option for members with specialized needs, including direct signing in third-party PDF tools and high-volume batch signing.
